

CAMDEN, SOUTH CAROLINA (April 28, 2008)

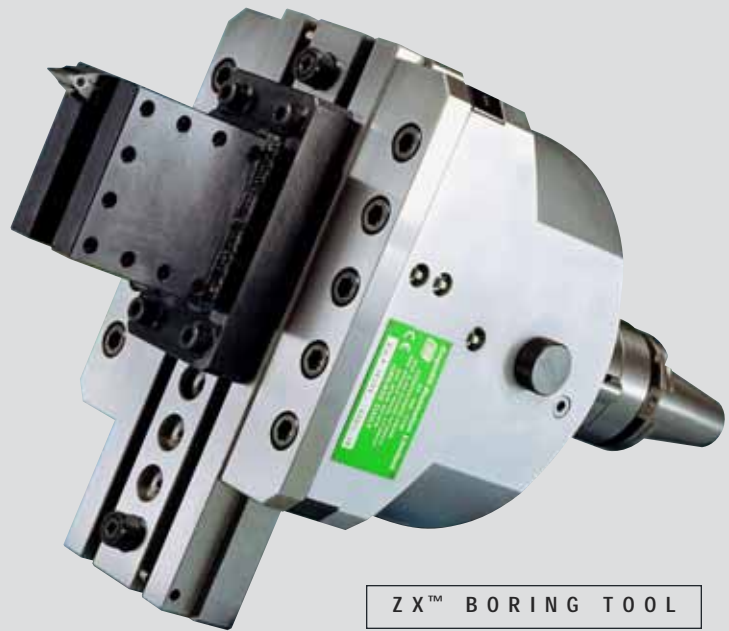

Cogsdill Tool Products, Inc. will conduct a simulated machining operation for their ZX™ boring tool at IMTS 2008 in booth #F-2270.

ZX Boring, Facing, and Contouring Systems machine surfaces in one set-up, or with a minimum number of tool changes. The tools are designed to run on horizontal boring machines with a CNC inner programmable quill. Users report reduced set-up time, higher machining rates, and productivity increases of 500% or greater.

The company will launch its new website in conjunction with the IMTS show (www.cogsdill.com), and attendees can view the new site in the Cogsdill booth.

Cogsdill will conduct live demonstrations of their CX-2000 External Roller Burnishing Machine at the show. The machine sizes, finishes, and work-hardens cylindrical diameters in seconds. The company will also exhibit a new and improved design for their Flipcut™ Back-Spotfacing and Chamfering Tools.

Other Cogsdill products on display will include tools for burnishing, mechanical hole-deburring, precision reaming and boring, automatic recessing and grooving, and generating heads.
